MAxlTH Raises $200K - Debuts iPhone App MATHdoozy for School-College Math Students

University Math Graduates provide real time, step by step solutions to math problems submitted via app or online

FRISCO, TX and HYDERABAD, India, Sept. 7th,2016

MAxlTH LLC, a Frisco, TX based tech startup announced today the launch of its mobile application MATHdoozy and web platform. The company has raised $200,000 from the founders and angel investors based in the US and India to power the launch of its new app and introduction to the US School-College education market.

The co-founders of the Company are both US experienced tech executives originally from Hyderabad, India.   They experienced the need for real time solutions to Math problems in case of their own children and started the Company to address the issue.   Every student faces math problems they are unable to solve and help is not instantly available.   Students are also often reluctant to seek help publicly.   MATHdoozy has recruited a network of highly qualified university graduates in math who are standing by to solve user's math problems real time 24/7/365.   It is fast, it is private, it is convenient, and available on demand via app or online.

Math is the only universal language and one needs to master it early on in life - no matter what one's long term ambitions or goals be - whether to grow up to be a rocket scientist, an entrepreneur, or a businesswoman.   The MATHdoozy app is currently available only on iOS in the Apple App Store at www.appstore.com/MATHdoozy and the Company expects to launch its Android version very shortly.   The service is also available online at www.mathdoozy.com where discounted packages are available.

JUST SOLVE IT!   That is the tagline of the Company and they are committed to solving all math problem from any student in real time with qualified human solvers. The app is not a calculator or a content library.

Key features of the app include:

•   All a student has to do is take a picture of the problem and submit.   The problem could be from a textbook, a question paper or even hand written in a sheet of paper;
•   The student adds a simple text message for easy reference along with the picture;
•   Notification when the solution to her problem is posted in-app;
•   An online archive of all past solutions for future reference.

"We experienced and recognized the market opportunity first hand with our own kids in the US," said Narayan Reddy, co-founder and CEO. "MATHdoozy was designed so that every math student could have immediate access to help with the toughest of their math problems. Our Solvers do not know anything about the student and the entire exchange is completely anonymous, confidential, and technically filtered to ensure appropriate content.   We are currently focused on Math only and would like to go global with an India-based fulfillment center that provides us scalability and growth".
